

Difficult diseases have met their match.

Important updates to your profile on ResearchMatch

ResearchMatch honors diversity and wants you to be able to more fully describe yourself on your profile. Recently, a few questions were added to the registration process that will let you enter your sex assigned at birth, gender identity, race, and ethnicity.

Follow these steps to make changes to your Volunteer profile:

Step 1: Log into ResearchMatch and click on ***“Update your health information.”***

Step 2: On the left-hand side you will see new demographic categories that have been added and a note to update this information. Click on ***“Gender Identity”*** and ***“Race and Ethnicity”*** within this menu to update your profile.

DASHBOARD

Please update your race and gender information [here](#).

Why were new demographic questions added?

The more information you provide -- such as your gender identity, weight, health conditions, medications, and the distance you're willing to travel -- the more likely you are to receive study invitations specific to you. These new demographic questions may help you receive study invitations that are relevant.

How can I find research studies that are relevant to me?

When you include your health conditions, like high blood pressure, ResearchMatch displays a list of research studies for you that are focused on those conditions. The list will include studies that are within the distance you said you were willing to travel. You will find your list of studies on your dashboard under your health Conditions section.

Your volunteer dashboard also lists all the study invitations you've received from researchers! No need to scroll through your emails to indicate your interest in learning more about research studies. These are now easy to find on your Dashboard.

Log into ResearchMatch and update your information today!
